Quality and reliability is our tradition

KYORITSU®

POWER QUALITY ANALYZER
KEW 6315

- ***Simultaneous Power & Power quality measurements***
  Power/ Harmonics/ Waveform/ Power quality are recorded at all CHs. (Voltage: 3ch, Current 4ch)
- ***Helpful support functions***
  Quick Start Guide, Wiring check and Sensor detection for easy and reliable measurement
- ***Measurement with high accuracy***
  Guaranteed accuracy: ±0.3%rdg (energy), ±0.2%rdg (voltage/ current)
  Complies with the International Standard IEC 61000-4-30 Class S and the European Standard EN 50160
- ***Remote monitoring on PC and Android™ device***
  Remote checking of measurement in real-time is possible via Bluetooth® communication. Recorded data can be saved in the supplied SD card. EN 50160 report can be generated after survey by PC software.
- ***Various Clamp Current Sensors***
  Various types of clamp and flexible sensors are available: from 1000mA Range up to 3000A Range and Earth leakage measurements
- ***Energy consumption check on site***
  Trend and demand graphs for easy recognition. TFT color display with high resolution.
- ***IEC 61010-1 CAT Ⅳ 300V, CAT Ⅲ 600V, CAT Ⅱ 1000V***

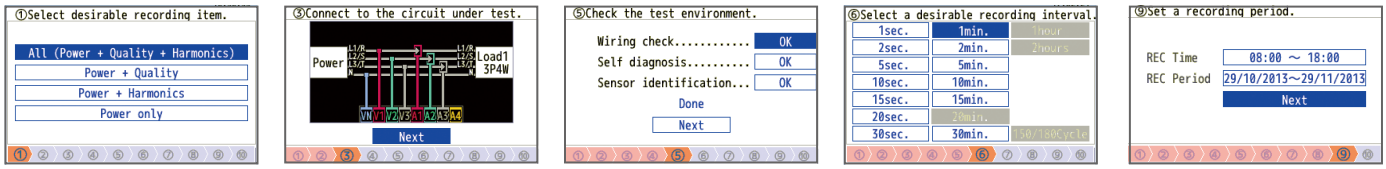
Easy-to-use setting to simultaneous power energy and power quality recordings

START /STOP Quick Start Guide

Easily and securely starts recording

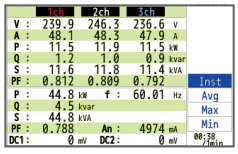
One-Touch START/STOP Key for Quick Start Guide providing easy setup guides.



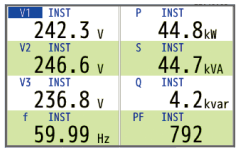
Guide start → Connect to the circuit → Wring check → Select interval → Set recording time → Start recording

W/Wh Power & Energy

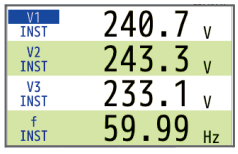
Instantaneous value



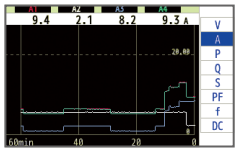
List



Zoom(8-split)



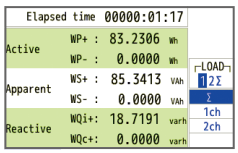
Zoom(4-split)



Trend

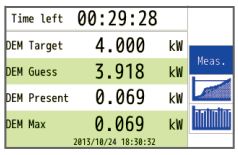
- Measures instantaneous / average / min / max for voltage, current, active / reactive / apparent power, PF (cosfi) and line frequency all on one screen.
- The recording time for these parameters can be set from 1 second up to 2 hours in several steps.
- Trend of all main parameters and customized Zoom functions.
- Function to define size of capacitor banks of PF correction unit.

Integration value

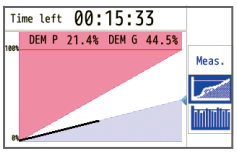


- The display will list the active / reactive / apparent energy in total and for each phase consumed (or generated in case of co-generation like solar panels, etc).
- The elapsed time is also shown on the same display screen.

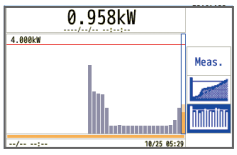
Demand



Measurement



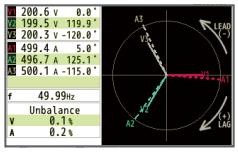
Change in specific period



Demand change

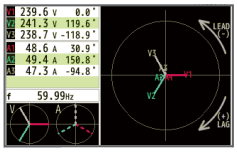
- To support demand control, present energy usage and estimated value are displayed on a graph while recording max demand value and the occurred time.

Vector and Wiring check



Vector

Wiring check



Ideal vector

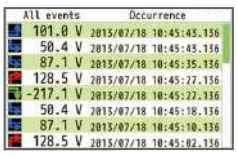
- Can display voltage and current by vector per CH and also unbalance ratio.
- Wiring check function confirms connection and displays ideal vector (at the lower left corner) according to the selected wiring system, and shows connection errors.

PRINT SCREEN Print Screen

- This function "takes a color photo" of the display screen and saves it as BMP file useful for reports.

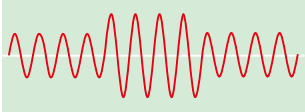
QUALITY Power Quality

Event



Measures voltage swells / dips / interruptions / transients and inrush currents that may indicate a weak power distribution system. Such phenomena may damage or reset devices. KEW 6315 can catch swells / dips / interruptions and inrush currents based on half cycle (10 ms @ 50Hz or 8.3ms @ 60Hz) TRMS.
All necessary data is displayed by pressing one key.

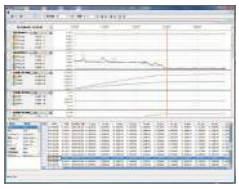
- **Swell**
  Swell is a instantaneous voltage increase, most of the time originated by upstream power line failure or switching OFF large load or switching ON large capacitor.



POWER QUALITY ANALYZER KEW 6315

Windows software for data analysis and setting via USB port

- Automatic creation of graph and list from recorded data.
- Uniform management of setting and recorded data acquired from multiple devices.
- Data can be expressed in crude oil and CO_2 equivalent values in the report.



〈System requirements〉
- OS : Windows® 8/10
- Display : XGA(Resolution 1024×768 dots) or more
- Hard-disk: Space required 1Gbyteor more
- Other : With CD-ROM drive and USB port, NET Framework (3.5 or more)

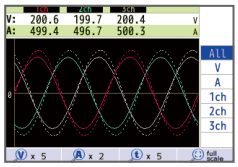
※Windows®is registered trademark of Microsoft in the United States.

Real time and Remote measurements

- Measurements can be graphically displayed on Android™ devices or PC in real-time via Bluetooth® communication.

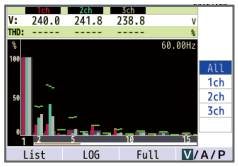
※Bluetooth® is a registered trademark of the Bluetooth SIG, Inc.
Android™ is a registered trademark of the Google Inc.

Waveform

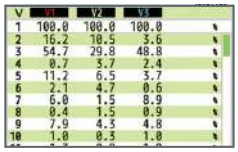


- Displays voltage and current on each Ch by waveform.
- Scales of voltage/current axis and time axis are selectable, and also full-scale function for automatic scaling is available.

Harmonics Analysis

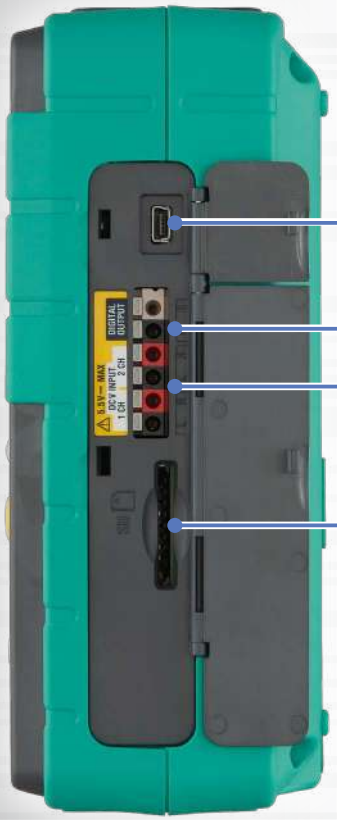


Graph



List

- Graphic display of harmonic components up to 50th order for voltage, current and power in total and for each phase.
- List display of harmonic content, rms value and phase angle of each order.
- Can analyze harmonic currents that may contribute to damage capacitor banks for PF correction, overheating transformers / neutral conductors / cables, unwanted tripping of breakers.



USB Terminal

Digital Output Terminal

- Open Collector Output (1ch)

Analogue Input Terminal

- 2ch DC100mV / 1000mV, 10V. To record additional parameters (i.e. Lux, Temperature, Humidity,etc.)

SD card Interface

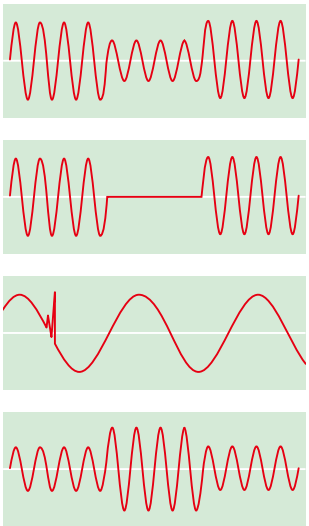
- SD cards up to 2GB can be used

Possible recording time
When the 2GB of SD is used:

Interval	REC item	
	Power	+Harmonics
1sec	13days	3days
1min	1-year or more	3mounths
30min	10-year or more	7-year or more

Data of power quality events are not considered to estimate the possible recording time. The max possible time will be shortened by recording such events.

- **Dip**
  Dip, as the opposite of a swell, is a instantaneous voltage decrease, most of the time caused by switching ON large load e.g. motors or by downstream power line failure.
- **Interruption**
  Interruption is a power line cut-off from any source of supply. It can be caused by a fault in a power line, which causes switch gear to open.
- **Transients/Over Voltage (Impulse)**
  Transient is a very fast and momentary voltage increase that can seriously damage devices connected to a power line. It may be caused by electrical switching events such as instable contacts of relays, tripping of breakers but also by lightening. KEW 6315 can catch Transients from 2.4 µs.
- **Inrush Current**
  Inrush current is a surge current that happens when motors, large or low-impedance loads are switched ON. Then the current will stabilize as soon as the load has reached normal working conditions.



Flicker

Designed to meet IEC 61000-4-15

Flicker is a phenomenon giving an impression of unsteadiness of visual sensation induced by periodic voltage changes caused by fluctuating loads when using: arc furnace, spot welder, crane, excavator, etc..

Load current clamp sensors

MODEL 8128 MAX 50A φ24

MODEL 8127 MAX 100A φ24

MODEL 8126 MAX 200A φ40

MODEL 8125 MAX 500A φ40

MODEL 8124 MAX 1000A φ68

Load current flexible clamp sensors

KEW 8135 MAX 50A φ75

KEW 8130 MAX 1000A φ110

KEW 8133 MAX 3000A φ170

Before connecting with the sensors KEW 8133 or KEW 8135, confirm that the internal firmware version is later than the one listed in the table below.

MODEL	Firmware version
KEW 8133	V1.50 or later
KEW 8135	V3.00 or later

The latest firmware is available on our website.

Leakage &Load current clamp

KEW 8146 MAX 30A φ24

KEW 8147 MAX 70A φ40

KEW 8148 MAX 100A φ68

※8146/8147/8148 can measure up to 10A

Power supply adaptor

MODEL 8312

Magnetic carrying case

MODEL 9132

Can you close your distribution board door during surveys?

The KEW6315 facilitates safe testing by being extremely compact and with two clever option extras: a magnetic case(9132) for attaching it to the sides of metal enclosures and a power supply adaptor(8312) which takes the power for the instrument from the supply being measured.

Safety Warnings : Please read the "Safety Warnings" in the instruction manual supplied with the instrument thoroughly and completely for correct use. Failure to follow the safety rules can cause fire, trouble, electrical shock, etc. Therefore, make sure to operate the instrument on a correct power supply and voltage rating marked on each instrument.
